Jim and Laura - here are the modifications to the tables EPA has determined are needed. In addition, the attached spreadsheet provides the cumulative risk tables for the final BHHRA. Let us know if you wish to discuss further.

Starting with the list of tables in the Sept 17, 2012 version, the following tables will be deleted:

3-13 through 3-18
5-6 and 5-7
5-48 and 5-49
5-57 and 5-58
5-74 through 5-93
5-98 through 5-110
5-115 through 5-117
5-120 through 5-122
5-124.

Tables 3-11 and 3-12 will be modified; Table 3-11 in its description (change to EPC by river mile - add a footnote to indicate that SMB data was used), 3-12 will present the combined multi-species harbor-wide EPCs, and combine into table 3-11 (since there is only one, it doesn't need it's own table). Tables 5-95 and 5-96 present SMB child hazard, will be modified to be hazard by river mile for childhood consumption at recreational rates. Tables 5-96 and 5-97 need to be validated that the titles in the Table of contents are correct - they are currently identified as presenting the same information, which is not necessary. Tables 5-111 through 5-114, 5-118 and 5-119, 5-123 and 5-125 will be modified to reflect dispute decision. Additionally, all the child and infant tables should only present noncancer hazard.

Here are the updated cumulative risk tables. The Green tabs are complete, although there needs to be some discussion as to whether the whole body for the subsistence fisher scenario should remain. The red tabs for the recreational fisher RME needs updated calculations and both the RME and CT for SMB need updated descriptors to indicate multi species by RM rather than SMB - a note needs to be added to the table to indicate data based on SMB.

2012-12-14 BHHRA Cumulative Risk Tables.xlsx
